THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

**Election/Restrictions**

Claims 8-42 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/31/2009.

This application is in condition for allowance except for the presence of claims 8-42 directed to species non-elected without traverse. Accordingly, claims 8-42 will be canceled by an examiner's amendment, see below.

**EXAMINER'S AMENDMENT**

The application has been amended as follows:

**In the claims**

Cancel claims 8-42.

**Prior Art Citation**

**The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.**

Morishima (US 2002/0196719) and Ishimoto (US 2006/0187773), both disclose an optical disk apparatus having the ability of detecting axial-runout or the radial position of the optical disk.

**Reasons For Allowance**

**The following is an Examiner's Statement of Reasons for Allowance:**

**Re claims 1-6**

The prior art of record alone or in combination does not teach or suggest the information recording apparatus having the combination of elements with their recited functions, along with a storage means for storing an axial-runout amount detected in a predetermined radial position on the disk-shaped optical recording medium in timing of generation of the pulse signals by the pulse signal generating means in correspondence with the count value in the counting means; a light source to emit a light beam of a predetermined wavelength modulated with information to be written to the information recording surface of the disk-shaped optical recording medium; a near-field light

projecting means for condensing a light beam emitted from the light source and projecting the condensed light beam as near-field light to the information recording surface when it is located in a field near the information recording surface of the disk-shaped optical recording medium; a radial-position information detecting means for detecting radial-position information indicative of a radial position on the information recording surface of the disk-shaped optical recording medium being irradiated with the light beam from the near-field light projecting means; a gain generating means for generating a predetermined gain corresponding to radial-position information detected by the radial-position information detecting means; an axial-runout amount reading means for reading an axial-runout amount stored in the storage means correspondingly to the count of pulse signals counted by the counting means; a first controlling means for generating a control signal by multiplying the axial-runout amount read by the axial-runout amount reading means by the predetermined gain generated by the gain generating means to control the near-field light projecting means to follow the axial-runout amount; a return-light amount detecting means for detecting a return-light amount of the near-field light projected to the information recording surface; and a second controlling means for controlling the near-field light projecting means on the basis of the linear characteristic of the return light amount of the near-field light detected by the return-light amount detecting means to keep a predetermined distance within the near field from the information recording surface, as set forth in claims 1-6.

**Re claim 7**

The prior art of record alone or in combination does not teach or suggest the information recording method having the combination of steps with their recited process, along with a storing step in which an axial-runout amount detected in a predetermined radial position on the disk-shaped optical recording medium in timing of generation of the pulse signals in the pulse signal generating step is stored in correspondence with the count value counted in the counting step; a near-field light projecting step in which there is condensed a light beam of a predetermined wavelength modulated with information to be written to the information recording surface of the disk-shaped optical recording medium and emitted from a light source and the condensed light beam is projected as near-field light to the information recording surface from a near-field light projecting means located in a field near the information recording surface of the disk-shaped optical recording medium; a radial-position information detecting step in which there is detected radial-position information indicative of a radial position on the information recording surface of the disk-shaped optical recording medium being irradiated with the light beam from the near-field light projecting means; a gain generating step in which there is generated a predetermined gain corresponding to radial-position information detected in the radial-position information detecting step; an axial-runout amount reading step in which an axial-runout amount stored in the storing step is read correspondingly to the count of pulse signals counted in the counting step; a first controlling step in which a control signal is generated by multiplying the axial-

runout amount read in the axial-runout amount reading step by the predetermined gain generated in the gain generating step to control the near-field light projecting means to follow the axial-runout amount; a return-light amount detecting step in which there is detected a return-light amount of the near-field light projected to the information recording surface; and a second controlling step in which the near-field light projecting means is controlled based on the linear characteristic of the return light amount of the near-field light detected in the return-light amount detecting step to keep a predetermined distance within the near field from the information recording surface, as set forth in claim 7.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
